

onto a passive SOI photonic platform. This type of integration yields a large potential for the realization of complex optical functionalities in combination with active devices such as high-speed amplifiers and arrays of narrow-linewidth DFB lasers.

Acknowledgments

The authors thank E. H. Bernhardt, R. M. de Ridder, and M. Hammer for their help with the simulations. Funding through the European Union's Sixth Framework Programme (Specific Targeted Research Project "PI-OXIDE", contract no. 017501), the European FP6 Network of Excellence ePIXnet, and the Smartmix "Memphis" programme of the Dutch Ministry of Economic Affairs is acknowledged. G. Roelkens acknowledges the Fund for Scientific Research Flanders (FWO) for a post-doctoral grant.
